

Financial Services

“Telliant has a robust practice partnering with financial services and banking technology firms to develop and enhance their products and solutions...”

Challenges Facing Financial Services

The Financial Services sector has endured many challenges over the last few years. With financial institutions coming under great scrutiny, several new regulations have been put in place to try to make the industry more secure. Organizations are leveraging the latest technology innovations to comply with new regulations and to effectively compete and succeed.

Telliant's Unique Capabilities

Telliant has extensive experience in creating and delivering cutting edge solutions to the financial services industry. The core team of the company has a long track record of innovation in financial technology. Our team's product development experience covers a wide range of specialized areas within the financial services domain. We excel in identifying and leveraging technology to achieve speed, security, scalability, and availability which are the core requirement of most fin-tech software applications. Whether it is high-speed transaction processing, advanced image recognition, secure monetary exchanges, or high performance business intelligence applications, we understand the critical factors that make financial technology software succeed in the marketplace.

Specific Areas of Expertise:

Core Banking: This is the centerpiece of all banking processes. Core banking processes are the workhorse of the bank, and therefore must be a comprehensive, integrated, highly scalable, agile system with the ultimate flexibility to allow for innovation and change. Telliant's experience with developing brand new web and SOA architecture and in legacy conversion and modernization projects will be of great assistance.

Cards and Payments: Electronic payments through credit and debit cards are increasing globally thanks to the growth of the internet. Unique and innovative solutions for payment, merchant acquisition, processing, and reporting are being offered by software providers in response to enormous growth. Telliant has a great reservoir of knowledge in this arena and can help software providers create state-of-the-art products.

Mobile Banking: With the exponential growth of smart phone adoption, customers' expectations of available functionality in their mobile banking apps have increased. Mobile banking is a win-win for financial institutions with the reduction of costs related to servicing customers face-to-face. The mobile channel allows marketing of new products and services to customers with ease. It also serves as a way to stay in constant communication with the customers. Telliant has a proven track record in developing cutting edge mobile applications for iPhone, Android, and Windows platforms, using both native and cross-platform tools.

Loans and Mortgages: With increased regulations and restrictions on loans and mortgages, banks must rely on quality software applications to assist them with staying on top of these requirements. The technology in ending and loan origination solutions can make all the difference between winning or losing customers. Telliant is ideally suited to leverage technology to give you the edge needed to make your products stand apart from your competition.

Commercial Banking: Businesses rely on their banking relationships and various software solutions to manage payments, treasury management, trade finance, money market, foreign exchange, and loans and lending processes. At Telliant, we understand the need to keep products up-to-date with the latest features and functionalities. Our experienced teams are dedicated to delivering software on time and on budget.

Electronic Content Management: Content repositories allow banks and financial institutions the ability to provide records management, document workflow, document imaging, as well as critical reporting capabilities. New governance practices regarding document handling reduce corporate risk
